What is a Flatfoot Squeegee?

FLATFOOT is the brand name given to the specially angled blade for the Pro Squeegee. The angle is designed to maximize the surface area in contact with the film, thereby removing much more mounting solution than a standard Pro blade with a square edge.

- GT733** Dirt-Off Concentrate
- GT734** Dirt-Off Empty Quart Bottle (Not Shown)
- GT735** Film-On Concentrate
- GT736** Film-On Empty Quart Bottle (Not Shown)

Installation Tip

Dirt-off concentrate is designed to loosen dirt/smoke and other contaminants from glass for fast, easy window prep. Then use Film-On concentrate for the best application solution available! Pure surfactant, like that found in Film-On, leaves no residue like common soaps and shampoos.

After installing film, be sure to clean and polish it with Film Guard, a product specifically for window films. The giant-sized 19oz. aerosol cans make excellent add-on sales to your customers, too.

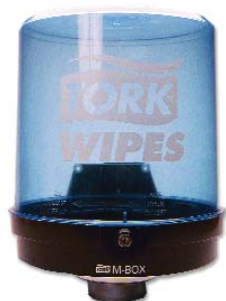

*Do not use GT714 on Bronze films, it will demetalize the film.

GT921 Jiffy Steamer Film Remover

Installation/Removal Tips

The Gasket Wizard makes working on roll-down windows a breeze! Stainless steel panels attach with stretch cords to pull the gasket back out of your way while you clean and apply tint. A real time saver for cleaner installations without damaging gaskets!

Pressure sensitive film removal can be accomplished by several methods. The most effective by far is the use of the Jiffy Steamer. This tool effectively and cleanly softens the adhesive allowing for easy removal of window film.

Which squeegee is best?

Black rubber squeegees are designed to be used in the cleaning of windows by squeegeeing off the cleaning solution after scraping or scrubbing the windows. On the facing page, the Squeegee and Channel (GT053-056) in conjunction with an Unger Pro handle (GT050) is the best choice for cleaning flat glass. The Black Smoothie Tube Squeegees are the better choice for cleaning automotive windows due to the curvature of glass.

Harder durometer squeegees are needed to properly remove application solution from behind films. The Power Stroke Squeegees (GT254-256), Super Clear Max Squeegee (GT203-204), or Blue Max Squeegee (GT117, 122), used in conjunction with an Unger Pro handle, are all excellent for vehicular work.

Flat glass installers should use a Blue Squeegee Refill (GT118) in a channel with the Unger Pro handle (GT050) to squeegee out the mounting solution on films up to 6 millimeters thick. The ergonomic Silver Security Squeegee (GT042) or a Pro Squeegee (GT062 or GT064) have been proven highly effective squeegees on both thicker security films and sputtered films.

Is Harder Better?

Not really! Every installer has a few favorite hard cards and there are many different types of situations where you might need one. The Gold Teflon (GT086GLD), Black Teflon (GT086BLK), and White Teflon (GT086) are the most popular and excellent for many vehicular, flat glass, and vinyl installations. Try a Platinum hard card (GT086PLT) for heat shrinking rear windows. The Diamond Tip (GT113) is new and many installers like it's angled tips for getting into corners; it is available in 4 hardnesses to meet your personal preferences. (White hardest to green softest.)

Are Meters Really Necessary?

The proper use of professional quality meters and measuring devices is mandatory in correctly determining glass type, construction, transmission, and emissivity. Lack of knowledge of these factors is the primary cause of improper film selection. Be an informed professional by using the correct tools.

Film Handler

The 72" Film Handler is a must have tool; especially when using 60" and 72" film. Be sure to add the 12" Riser Assembly (GT913) when installing Security Film. If you do not want to invest in a Film Handler, try a Box Slitter Channel (GT822) with a blade holder (GT821). This tool will allow you to slit film as you pull it off the roll!

Squeegee Tips!

- Always remember that the more solution removed during film application, the better the installation will appear.

- For automotive work, the Conqueror (GT202) and Side Swiper (GT207) have been proven in getting those hard to reach areas. The Slim Foot (GT040) and Big Foot (GT043) are designed specifically to reach into low profile areas of many rear windows and around rear brake lights.

- Use a Hard Card, Slammer (GT091), or Shuttle (GT092) to remove water pockets and "bump" out the edges, enhancing any application.

- You can increase the leverage of a standard handled squeegee by adding a D-Grip Motus handle (GT030). Excellent for heavy, security film applications.

- GT211** 3" Triumph Blades, Pack of 10
- GT212** 1" Blade Ade

The Scraper Choice Depends on the Application!

The 6" Triumph Scrapers and Blades are the best and most widely used for flat glass cleaning. The type of Triumph Scraper depends on personal preference.

For automotive glass, use either single edge blades, stainless steel single edge blades or plastic razor blades with the holder of your preference.

Aren't All Knives and Blades the same?

The answer is no, so you want to make sure that you choose the correct tool for the job.

REMEMBER -- ANY BLADE CAN CUT OR SCRATCH GLASS! It all depends on the glass, edge on the blade, and angle of the cut. If you use stainless steel blades exclusively, please note the GT126 and GT226 are the only knives loaded with stainless steel blades.

If you're installing thick security films, you need a wide blade knife like the Auto Lock 8-Point (GT111) and the triple-honed, super-sharp blades like the Olfa UltraMax (GT112). They cut through thick films like butter!

Remember the BLADEater to protect your customers and their property from unwanted and dangerous blade tips. No matter what knife or blade you use, be sure to use a SHARP blade every time.
